

Poster Presentations

Alphabetical order

- P01 Class-Specific Ultra-structural Organization of *Drosophila* Sensory Neuron Dendrites**
Reiko Amikura RIKEN Brain Science Institute, Japan
- P02 Multipotent Cells from Mammalian Iris Pigment Epithelium**
Maki Asami RIKEN Center for Developmental Biology, Japan
- P03 Genetic Analysis of Cerebellum Development in Zebrafish**
Young-Ki Bae RIKEN Center for Developmental Biology, Japan
- P04 What is the Significance for Synaptic Plasticity of the Developmental Change in N-Methyl D-Aspartate Receptor Subunit Expression?**
Thomas Bartlett MRC Centre for Synaptic Plasticity, UK
- P05 Specification of Circumferential Ascending Interneurons (CiAs) in the Zebrafish Spinal Cord**
Manuel Batista University of Cambridge, UK
- P06 The Role of Eya1 and Six1 during Development of the Zebrafish Inner Ear**
Bernardo Blanco University of Sheffield, UK
- P07 The Organization and Development of the Leg Motor System of *Drosophila***
David J. Brierley MRC, King's College London, UK
- P08 Slit1a Inhibits Zebrafish Retinal Ganglion Cell Arborisation and Synaptogenesis Via Robo2-Dependent and -Independent Pathways**
Douglas S. Campbell University of Utah, USA / RIKEN Brain Science Institute, Japan
- P09 Regulatory Networks Underlying Lens Development and Evolution**
Wei-Chung Chen University of Oxford, UK

- P10 Using Inducible RNAi to Identify Molecules Essential for Maintenance of the Adult Olfactory Circuit in the *Drosophila* Olfactory Lobe**
Albert Chiang National Centre for Biological Sciences, India
- P11 The Beginnings of Coordination: Emerging Function in the *Drosophila* Nervous System**
Sarah Crisp University of Cambridge, UK
- P12 Transcriptional Profiling a Morphogen: Analysis of Gene Expression in Neural Cells Responding to Graded Sonic Hedgehog**
Catarina Cruz National Institute for Medical Research, UK
- P13 Knocking Ret-Trk Chimeric Receptor into the Ret Locus Partially Compensates for the Deficits in Ret-deficient Mice**
Hideki Enomoto RIKEN Center for Developmental Biology, Japan
- P14 Sustained FGF Signals Can Prevent the Otic Fate**
Sabine Freter RIKEN Center for Developmental Biology, Japan
- P15 Analysis of Lumbar Motoneuron Deficits in GDNF Ligand/ Receptor Knockout Mice**
Thomas William Gould RIKEN Center for Developmental Biology, Japan
- P16 Selective Expression of Knot/Collier, a Transcriptional Regulator of the EBF/Olf-1 Family, Endowed a Class-specific Dendritic Morphogenesis**
Yukako Hattori Kyoto University, Japan
- P17 Distinct Signaling Pathways Regulating Successive Stages of Dorsal Forebrain Commissure Development**
Michael Hendricks Temasek Life Sciences Laboratory, Singapore
- P18 The Vertebrate Phylotypic Stage and an Early Bilaterian-related Stage in Mouse Embryogenesis Defined by Genomic Information**
Naoki Irie Kyoto University, Japan

- P19 Positional Information and Neuron Identity in the *Drosophila* PNS**
Md. Rezaul Karim RIKEN Brain Science Institute, Japan
- P20 *Drosophila* Neurons Form Intra-axonal Compartments through a Cell-autonomous Mechanism**
Takeo Katsuki National Institute of Genetics, Japan
- P21 Modulation of Notch Signal Transduction by Endocytotic Regulators Numb and the Nedd4 Family of Ubiquitin Ligases**
Koji Kawahashi RIKEN Center for Developmental Biology, Japan
- P22 Six1 is Required for Generation of Pioneer Neurons and Olfactory Sensory Neuron Precursors in Olfactory Epithelium**
Kiyoshi Kawakami Jichi Medical University, Japan
- P23 Migration of Neuroblasts and Olfactory Ability Following the Elimination of Programmed Cell Death in Bax-KO Mice**
Woon Ryoung Kim Korea University, Korea
- P24 Identification of Novel Zebrafish Dab1 and its Interaction with Vldlr, a Reelin Receptor**
Youhei Kinugawa Kobe University, Japan
- P25 *Drosophila* Neuroblasts Undergoing Symmetric Division: What Is Their Fate?**
Atsushi Kitajima RIKEN Center for Developmental Biology, Japan
- P26 Membrane Proteins in the Upper Cortical Layers, Ephrin-A5, Semaphorin-7A and Kit Ligand, Co-operate to Control Lamina-Specific Thalamocortical Axon Targeting**
Takuro Maruyama Osaka University, Japan
- P27 Separate and Synergistic Control of Dendrite Arbor Morphology by the Transcription Factors Knot/Collier and Cut**
Adrian Moore RIKEN Brain Science Institute, Japan
- P28 Relationship Between Sub-axonal Compartment and Axonal Turning *in vitro***
Ryosuke Morita National Institute of Genetics / SOKENDAI, Japan

- P29 Identification of Novel Interaction Partners for robo2 During Sensory Axon Guidance in the *Drosophila* Embryo**
Eli Mrkusich University of Melbourne, Australia
- P30 Knocking Ret-Trk Chimeric Receptor into the Ret Locus Partially Compensates for the Deficits in Ret-deficient Mice**
Mayumi Nagashimada RIKEN Center for Developmental Biology, Japan
- P31 Comparison of *Er81* Expression Between the Brains of Zebrafish and Mouse**
Yoshihiro Oomiya Kobe University, Japan
- P32 FlyPNS, a Database of the Embryonic and Larval Peripheral Nervous System of *D. melanogaster***
Virginie Orgogozo RIKEN Brain Science Institute, Japan
- P33 Wnt Signaling Promotes Regeneration in the Retina of Adult Mammals**
Fumitaka Osakada RIKEN Center for Developmental Biology / Kyoto University, Japan
- P34 Analysis of the *Olig Family (Oli)* Gene in the Developing Nervous System of *Drosophila***
Justine Oyallon National Institute for Medical Research, UK
- P35 The Development of Walking Behavior in *Drosophila***
Sudhir Palliyil National Centre for Biological Sciences, India
- P36 The Role of Forebrain in Olfactory Induction**
Marie Paschaki RIKEN Center for Developmental Biology, Japan
- P37 Regulation of Filopodia Formation in *Drosophila* Sensory Neuron Dendrites**
Arvind Ramanathan RIKEN Brain Science Institute, Japan
- P38 Is Corticosterone Good or Bad for Stress-induced Modulation of Anxiety-like Behaviour?**
Rajnish P. Rao National Centre for Biological Sciences, India

- P39 Benzodiazepine Receptors and PAF Receptors Role on Development of Anterograde and Retrograde Amnesia**
Manish Kumar Saraf Post Graduate Institution of Medical Education and Research, India
- P40 Genetic Dissection of Geometry of Dendritic Trees**
Daichi Sato Kyoto University, Japan
- P41 Genetic Single-Cell Mosaic Analysis Implicates ephrinB2 Reverse Signaling in Projections Mediating Visuomotor Transformation in Zebrafish**
Tomomi Sato RIKEN Brain Science Institute, Japan
- P42 Control of Proximal-Distal Distribution of Branching Points in Dendritic Trees of *Drosophila* Sensory Neurons**
Daisuke Satoh Kyoto University, Japan
- P43 Meltrin beta / ADAM19 Expressed in Cardiac Neural Crest Cells is Required for Ventricular Septum Formation of the Heart**
Atsuko Sehara-Fujisawa Kyoto University, Japan
- P44 LKB1 and STRAD Initiate Axon Differentiation during Neuronal Polarization**
Maya Shelly University of California, Berkeley, USA
- P45 Fgf- and Retinoic Acid-Dependent Ectopic Formation of Posterior Hindbrain with Altered *cdx-hox* Codes**
Takashi Shimizu RIKEN Center for Developmental Biology, Japan
- P46 Protrudin Interacts with Rab11-GDP and Induces Neurite Formation by Directional Membrane Trafficking**
Michiko Shirane Kyushu University / PRESTO
- P47 Using DamID to Dissect the Transcriptional Networks Determining *Drosophila* Neural Stem Cell Fate**
Tony D. Southall The Gurdon Institute, University of Cambridge, UK
- P48 Self-organized Mechanism for Development of Space-filling Dendrites**
Kaoru Sugimura Kyoto University / JSPS, Japan

- P49 Plexin-A2 Neutralizes Repulsive Signal of Sema6A on Target Neuron and Regulates Mossy Fiber Projection in the Hippocampus**
Fumikazu Suto National Institute of Genetics / CREST, Japan
- P50 A Neuronal Identity Code for the Odorant Receptor-Specific and Activity-Dependent Axon Sorting**
Haruki Takeuchi The University of Tokyo, Japan
- P51 Functional Analysis of the Zebrafish Nodal-related Protein Cyclops Reveals New Roles for the Pro-domain**
Jing Tian Temasek Life Sciences Laboratory / National University of Singapore, Singapore
- P52 Mitochondrial Protein Preli-like Regulates Development and Maintenance of Dendritic Trees of *Drosophila* Sensory Neurons**
Asako Tsubouchi Kyoto University / JSPS, Japan
- P53 Molecular Functions of 7-pass Transmembrane Cadherins in Dendritic and Axonal Morphogenesis**
Tadashi Uemura Kyoto University, Japan
- P54 Disruption of GDNF Signaling in Postmigratory Enteric Neurons Causes Unconventional Neuronal Death in the Colon and Leads to Hirschsprung's Disease**
Toshihiro Uesaka RIKEN Center for Developmental Biology, Japan
- P55 Reexamination of Control of Dendritic Avoidance by 7-pass Transmembrane Cadherin in *Drosophila* Sensory Neurons**
Tadao Usui Kyoto University, Japan
- P56 FGF8-induced Semaphorin3F Regulates Growth Polarity of Midbrain Dopaminergic Axons**
Kenta Yamauchi Osaka University, Japan
- P57 Role for the JAK/STAT Signal in the *Drosophila* Optic Lobe Development**
Tetsuo Yasugi The University of Tokyo, Japan

**P58 PROSPERO Regulates the Terminal Differentiation of *Drosophila*
CNS Glia**

Yoshihiro Yuasa National Institute of Genetics, Japan
